NOTE: No effort is being made by EMA, the EMA Digital Council or Motion Picture Laboratories to in any way obligate any market participant to adhere to the Common Metadata or EMA Metadata. Whether to adopt the Common Metadata and/or EMA Metadata in whole or in part is left entirely to the individual discretion of individual market participants, using their own independent business judgment. Moreover, EMA, the EMA and Motion Picture Laboratories each disclaim any warranty or representation as to the suitability of the Common Metadata and/or EMA Metadata for any purpose, and any liability for any damages or other harm you may incur as a result of subscribing to this Metadata.

1 INTRODUCTION

The Entertainment Merchant’s Association (EMA) and the Digital Entertainment Group (DEG) have defined metadata for the description of information delivered from Publishers to Retailers. This document was developed by the EMA Digital Council and the DEG Media and Content Operations Committee with the objective of standardizing the metadata communication from content providers to digital retailers.

This document defines Media Entertainment Core Metadata v2.1. This is also referred to as MEC Metadata, or MEC.

MEC Metadata builds upon EMA Metadata and Common Metadata developed by Motion Picture Laboratories (MovieLabs), EMA, DEG and others. Common Metadata includes elements that cover typical definitions of media, particularly movies and television. Common Metadata has two parts: Basic Metadata and Digital Asset Metadata. Basic Metadata includes descriptions such as title and artists. It describes information about the work independent of encoding. Digital Asset metadata describes information about individual encoded audio, video and subtitle streams, and other media included. Package and File Metadata describes a single possible packaging scenario and ties in other metadata types. Ratings and Parental Control information is described.

Common Metadata is designed to provide definitions to be inserted into other metadata systems, such as was done here, EIDR metadata and UltraViolet metadata. Selected elements of the Common Metadata are used in derived specifications. Adopters then define additional metadata to cover areas not included in Common Metadata.

1.1 Document Organization

This document is organized as follows:

1. Introduction—Background, scope and conventions
2. Core Metadata—Definition of MEC Metadata.

1.2 Document Notation and Conventions

The document uses the conventions of Common Metadata [CM].

1.3 Normative References

All Common Metadata references are included by reference.
1.4 Informative References

1.5 XML Namespaces

This document defines:

- mdmec: includes Media Entertainment Core Metadata-specific data
  ‘mdmec’ builds on
- md: Common Metadata corresponding with Common Metadata [CM]

1.6 Identifiers

Identifiers must be universally unique. Recommended identifier schemes may be found in Common Metadata [CM] and in DECE Content Metadata [DECEMD].

The use of Entertainment Identifier Registry identifiers (www.eidr.org) is strongly encouraged. Please see [EIDR-TO].

1.7 Status

This specification is completed and ready for implementation. Although tested, we anticipate that additional implementation experience will yield recommendation for changes. Implementers should anticipate one or more revisions. Reasonable measures will be taken to ensure changes are backwards compatible. See Backwards Compatibility Best Practices in [CM]
2 MEC CORE METADATA

The section defines the MEC Metadata. The rules for what must be included and how it is encoded is in this section and its references.

Note that the structure accommodates additional data which may be included optionally.

The CoreMetadata element is defined to include MEC data.

2.1 CoreMetadata-type

This defines the MEC metadata, including both the descriptive information (Basic Metadata) and the encoding information (Physical metadata). It is as follows:

<table>
<thead>
<tr>
<th>Element</th>
<th>Attribute</th>
<th>Definition</th>
<th>Value</th>
<th>Card.</th>
</tr>
</thead>
<tbody>
<tr>
<td>CoreMetadata-type</td>

<tr>

<td></td>
<td></td>
</tr>
<tr>

</tr>
</tbody>
</table>

2.1.1 Publisher-type

<table>
<thead>
<tr>
<th>Element</th>
<th>Attribute</th>
<th>Definition</th>
<th>Value</th>
<th>Card.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publisher-type</td>

<td>md:OrgName-type (by extension)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>organizationID</td>
<td>Organization Identifier for the publisher. This is an ID use by the Publisher to refer to itself.</td>
<td>0..1</td>
<td></td>
</tr>
</tbody>
</table>
SortName is typically used when a Publisher has variations on its name that may not sort properly (e.g., some instances have a prefix).

2.2 Common Metadata derived types

Common Metadata [CM09] includes elements that cover typical definitions of media, particularly movies and television. Basic Metadata includes descriptions such as title and artists. It describes information about the work independent of encoding. Digital Asset metadata describes information about individual encoded audio, video and subtitle streams, and other media included. Package and File Metadata describes one possible packaging scenario and ties in other metadata types. Ratings and Parental Control information is described.

Common Metadata is designed to provide definitions to be inserted into other metadata systems, such as EMA’s. Although EMA uses some element from Common Metadata, it also defines additional metadata to cover areas specific to EMA’s requirements.

The following MEC types are derived directly from Common Metadata:

<table>
<thead>
<tr>
<th>MEC Type</th>
<th>Common Metadata Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>mdmec:BasicMetadata-type</td>
<td>md:BasicMetadata-type</td>
</tr>
<tr>
<td>mdmec:DigitalAssetMetadata-type</td>
<td>md:DigitalAssetMetadata-type</td>
</tr>
</tbody>
</table>

All mandatory elements and attributes must be included. Any optional elements may be included. The following elements and attributes are required for MEC usage, regardless of whether they are optional, except as noted.

The following table uses the following conventions:

- Structure is given by table indentation. Parent level elements to the left.
- Attributes begin with ‘@’. For example, @ContentID refers to the ContentID attribute.

### 2.2.3 Additional Usage Rules

- Original Release/Air Date (Year for features; Date for episodic television) – should be defined as the original release date in the target region of distribution.

- `StartsWith` search titles are included in `TitleAlternate` with `type` ‘`StartsWith`’.

- `ReleaseHistory` should apply to distribution target.
